

# COHAT

Comprehensive Oral Health Assessment and Treatment

## What are the benefits of COHAT?

The majority of dental diseases are missed as 60% of the tooth is hidden under the gum line, which is why it is necessary to perform a comprehensive assessment. With COHAT, each tooth is examined under and above the gum line. We discuss our clinical findings with you and create an oral homecare package for the individual animal.

## COHAT involves several steps:

### 1. BEFORE EXAMINATION

- ✓ A physical examination and detailed patient history obtained in a consultation
- ✓ An individually designed pre-anaesthetic check up based on the patient health history

### 2. DURING GENERAL ANAESTHESIA

- ✓ Whole mouth is examined and radiographed to assess the health of each tooth

### 3. TREATMENT

- ✓ A treatment plan will be proposed
- ✓ **We do not do any treatment without the owner's consent**
- ✓ A treatment plan and quote is created based on the clinical findings

## 4. Teeth are finally scaled and polished!

**Dr. Claudia** has more than 10 years experience as a veterinarian and was introduced to small animal dentistry in Paris, which led to further study at the European School for Veterinary Studies in Halmstad, Sweden, completing the ESAVS dental courses in small animal dentistry.
